User Manual

Setting Ozaas Smart APP

Download or scan the QR code and install the Ozaas Smart APP for iOS or Android.

Once you've downloaded or scanned the QR code, the app will request you to register your device. Enter your phone number or email and select your country of residence. If you have entered your phone number, you will receive a text with a registration code. If you have selected email, please create a password.

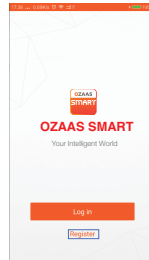

Android

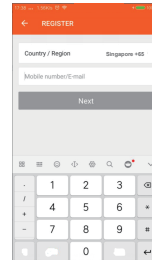

iOS

Input the Registration Code received via text if you've used your phone number or create password if you've used email address

Adding a New Device in Quick Connection

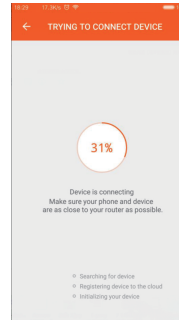

Make sure the Wi-Fi smart device is on standby (the blue light button flashes 2 times per second if the smart device is plugged in/ switched on) after it has been plugged in to the socket. Otherwise, you should hold the power button for 6 seconds to reset the device (for plug or switch). Bulb's power supply should be turned on/off continuously 3 times. The smart Wi-Fi devices only supports 2.4GHz Wi-Fi router.

- * Open app and click "+" to add device.
- * Select Wi-Fi network, input Wi-Fi password, Connect and click.

* Once connected, the app will enable a connection to the device. Click "OK".

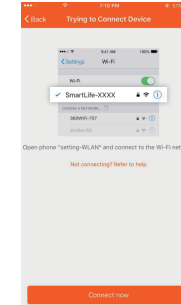

2

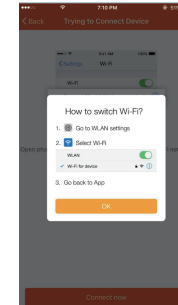

Adding a New Device in AP mode

- * Make sure the Wi-Fi device is on standby (the blue ring of the Wi-Fi device flashes once every 2 sec) after an appliance has been plugged in
- * Press "+" in the main menu of app.
- * Click "AP mode" and press Next Step in Add device.
- * Select Wi-Fi and input Wi-Fi password, press 'Next' in Set up Wi-Fi for device.
- * Press 'Connect' now.
- * Go to WLAN setting in your smart phone and select the "SmartLife xxx" for your WiFi, no need to input password once you select the "SmartLife xxx" (you can directly connect it if your OS is Android):
- * Go back to the app and press "connect" device name is "SmartLife xxx", and confirm device.

FAQ

1. Please check whether the device is powered on;
2. Check whether your phone is connected via Wi-Fi;
3. Check if device is ready for configuration. To get the device ready before configuration, manually press the device to get it ready. Please refer to "Product Instructions" or Device Reset Instruction for details. Each time you add a device, reset the Wi-Fi to get the device ready for configuration and make sure the router is working properly.
4. Check routers or related: If router is a dual-band router, select 2.4GHz network and add device. You will also need to enable router's broadcasting function.
Set up wireless router: Set encryption method as WPA2-PSK and authorization type as AES, or set both as auto. Wireless mode cannot be 11n only. To get a strong Wi-Fi signal, please keep device and route within a certain distance. Please refer to your Wi-Fi router manuals for settings. Check if connected devices have reached the maximum limitation of router's connection. If so, please try by turning off the Wi-Fi connection of some devices.
Router's wireless MAC filtering function is enabled. Remove the device from the filter list and make sure that router is not prohibiting device from connection.
5. Make sure the password entered in APP is correct when adding a new device.

4
